BACKGROUND AND PROJECT DETAILS

If we teleport 60 years back in time, it takes to a time and place when Kadoma Concession Claims were last formally mined. Located 21 Km North West from Kadoma, the Concession Area cover some 2637 tactares of lucrative mining ground in a potentially highly mineralized area on the famous Lily Shear Zone on the Kadoma Greenstone Belt. Extensive small scale mining took place more than 60 years ago as evidenced by the existence of a good 15 or so closed down small-scale mines.

Recorded historic production from the target area is just under 5tonnes of gold, with Farm resettlements of the last 18 years seriously affecting formal mining initiatives and accountability of the operations.

Exploration campaigns to resuscitate the area were pursued through 3 EPOS (No. 73, 147 & 641) and several initiatives but efforts did not yield much due to limited funding and lack of a full-scale exploration program. Only scoping activities were undertaken and the full potential of the area is yet to be delineated.

Project Summary 01

PROJECT DETAILS AND VALUE PROPOSITIONS

In 2003, a total of 41 samples were taken over a 1.03km strike, evaluating surface mineralization and checking potential of heap leaching. The average reef thickness estimated was 127cm and gold mineralization values averaging 6.8g/t, making the property quite attractive. There exists evidence of normal strike faulting and reef duplication, with the tranging wall reef enrichened to about 7.7g/t. The distribution of values from trace to 83g/t, shows that the gold distribution within the quartz reef is very inconsistent

Updated geological reports for the claims point to a value beyond 2.5 billion dollars. These reports are held by the mine directors and will be produced once a visit to the site has been arranged. For the meantime, reports that can be given are enclosed in our brochures.

Recommendations

The current owners of the project ideally want to work with would be investors on a Joint Venture. Given the fact that most investors in the Big Gold entities league prefer to buy the entire mines, The owners wish to sell the entire mine.

Project Summary 02

KEY STATISTICS

OVERVIEW

- 200 blocks measuring about 2637 tta
- >=4.0 gH
